U.S. Rocket Enters Outer Space

Signal Loud, Clear From 30,000 Miles

Lodrell Bank, England, Oct. 11 (UPI)—The American moon probe has gone higher than any man-made object ever recorded on the world's largest radio telescope here. British scientists announced.

"Everything is going according to plan," said Prof. Lovell told newsmen as his giant, six-tonne rocket was tracked by the American rocket through space.

The instrument began receiving signals from the rocket at 8:02 a.m. (4:32 a.m. EDT) today. Prof. Lovell said he had passed the 30,000-mile level. He said his scientists, manning the 20-foot-wide telescope, had never before recorded any man-made object so high out in space.

"It is very pleasant to be able to get the signals we are getting," he said. "We have never had such a performance."

Prof. Lovell said the American achievement was tremendous no matter what happened. "I would still say it was a tremendous success," he added.

"An amazing feat," hailed Prof. H. S. W. Massey, the man in charge of Britain's own artificial satellite program. He said he originally had doubts about America's ability to get the probe launched.

"The beginning of a new age of enlightenment of man's place in the universe," said the chairman of the British Inter-Planetary Society, Kenneth Gentry. "The Americans have continued to press forward with a scientific venture or research which is of great interest, especially given to development of rockets as weapons for man's destruction."

The signal was carried in bold black headlines across the front pages of Britain's early afternoon newspapers.

But there was a cautioning note from a director of the British Astronomical Association, B. R. Ridley.

"I shall be rather surprised if it does achieve its objective in the first attempt," he told newsmen. "It is not really likely that it will achieve its objective at the first attempt because of the very small margin of error permissible in the directional control."

"The whole thing is suspect," said Prof. Lovell, head of the Radio Astronomy Section of Cavendish Laboratories at Cambridge

Debate in UN Dims A-Test Ban Hopes

United Nations, N. Y., Oct. 11 (UPI)—The United Nations arms debate showed the United States and Russia so sharply split that they could not reach a day of agreement on suspension of nuclear weapons tests.

So far, the two powers that observers predicted a dark future for the Geneva Conference on Disarmament in other fields of disarmament had agreed to continue their talks on nuclear weapons tests.

The United States, in debate yesterday, declared it would suspend tests indefinitely.

Russia wound up the opening debate before the 18-Nation committee of experts gathered at the Palais des Nations in Geneva on Oct. 31 in a test ban.

The United States, in debate yesterday, declared it would suspend tests indefinitely.

A young assemblyman from Connecticut, Michael J. Cusick, of Bridgeport, Conn., asked the committee to block agreement on ending tests shots. The United States

(Continued on Page Three)

He listed the others as Argentina, Australia, Austria, Belgium, Canada, Denmark, Ecuador, Iran, Italy, Laos, Luxembourg, Norway, Portugal, Spain, Sweden, Switzerland and Thailand.

The resolution, introduced Friday morning, would have the U.N. General Assembly urge the United States to make every effort to reach agreement on suspension of nuclear weapons tests.

It adds that the three nuclear powers that have not yet signed the non-nuclear weapons test ban will proceed with negotiations in progress.

The resolution further:

"Encourages the East-West technical talks on ways to prevent surreptitious testing of nuclear weapons."

"Expresses determination to bring about controlled worldwide

disarmament."

3. Asks Secretary General to assist and assist in the forthcoming negotiations.

The Soviet Union submitted rival resolutions a week ago, calling for immediate cessation of nuclear tests.

Russia insisted she would agree to halt the tests only if the United States and Britain also imposed an immediate ban "at once."

The United States followed up

the Russian proposal last night for suspension of tests during the Geneva talks.

Nothing was disclosed officially.

Informal delegations said there were some speakers, including the United States.

A Negro inmate was stabbed to death at Trenton, N. J., State Penitentiary, Saturday night.

Moon Missile In Outer Space

(Continued from Page One)

time whether it will be achieved.

The missile will stay within

40,000 miles of the moon at

least seven days.

It is theoretically possible that the satellite might actually strike the moon, but the chances of that are beyond the influence of the moon's gravity and go out into outer space.

Such theoretical attacks on

tracking stations

It was disclosed for the first

time that the missile carried by the satellite include one

for measuring the intensity of radio

signals direct from the

moon.

Inclusion of such an instrument

was prompted partly

by the recent discovery of a

potentially important

new source of energy.

It was indicated that the

launching speeds had been

slightly lower than were

anticipated.

All Stages Fired

The first stage appeared

to have been successfully

carried on its trajectory to the

northwest — higher than it should have been.

However, the launching was

considered a great success

and all fired in proper

sequence at full thrust,

and the payload of instruments

in the nose cone

all got off well.

If all goes well, the missile

will make some time Monday

afternoon.

The instrument packed nose

cone was described by the Defense

Department as "the

most accurate atomic

radiation detector ever made."

Dr. Robert Bennett, director of

electronics for the program, said

that if the missile proves to be

as good as it is expected to be,

it will be used to provide

information on the magnetic fields of the

earth and the moon.

It will also measure the number of meteorites it encounters.

Measure radiation intensity during flight from the earth to the

moon.

Determine internal tempera-

ture of the missile during flight.

Obtain a crude electronic pic-

ture of the surface of the moon.

Carried too, television cameras

on the hidden face times in the

dark.
