A MONTHLY PAPER DEVOTED TO THE INTERESTS OF GOOD HEALTH.

"AND THOU SHALT BRING FORTH TO THEM WATER OUT OF THE ROCK."

Vol. I. — No. 5.

THE HIGHLANDS, SOUTH MANCHESTER, CONN., JUNE, 1886.

AND THEIR ANTIODOTES.

Paracelsus said, "Poisoning is a certain procedure, for there is no disease that has not its specific remedy." The first faculty to secrete, the stomach, is furnished with the most powerful antitoxic humor at hand. It should be noted that this is the only place where the body can be protected against toxins. The stomach contains an acid such as hydrochloric acid, which is produced by the gastric mucosa. The acid reacts with alkaline substances, such as sodium bicarbonate, to form sodium chlorides and water. This reaction helps to neutralize any ingested poisons and protect the body from harm.

Drugs and other medicaments are also used to protect the body from toxins. For example, the use of antibiotics to treat infections caused by bacteria and other microorganisms.

The body's own immune system also plays a role in protecting the body from toxins. This system is capable of recognizing and destroying foreign substances, such as toxins.

In conclusion, the body is equipped with a variety of methods to protect itself from toxins. These methods include the use of antitoxins, antacids, and other medicaments, as well as the body's own immune system. It is important to note that the use of antitoxins and antacids should be done under the guidance of a healthcare professional, as these substances can be harmful if used improperly. The body's immune system is an important defense mechanism against toxins, and it is essential to maintain a healthy lifestyle to support this system.
For the Highland News.
QUI TRANSULTS SUSTINEIT.

Nature is the chemist; Nature the physician, in her laboratories this healing agency is prepared, fresh and dripping from her hand it is offered to the people. To the spring where it trickles down the rock, to the casing of the bottles in the packing-room, every process of manipulation is open to the eyes of the public and every form of investigation is practiced. Visitors throng the spring house day after day and watch with marked interest the preparation of these wonderful Highland Tonicas for the market. In striking contrast with this is the preparation of many of the so-called remedies, and medicinal waters, prepared behind closed doors, within secret laboratories, their formula a mystery, the public are asked to receive with faith these compounds and accept all that is said for them as reliable. Tonica water is known by its work, many are the testimonials from the most reliable sources as to what it has already accomplished. In a few short months it has won a place in the confidence of the people second to none.

The special qualities of the Highland Tonicas are never known to vary with the seasons, even their natural temperature remaining uniform at all times.

Highland Tonica is excellently effective in treating palpitations and heart complaints. A glassful taken just before bed time will often produce sleep when all else has failed. Try it.

The good qualities of the Highland Tonicas are not affected by transportation. If the bottles are kept in a cool place the waters will retain their virtues for an indefinite time.

Americans visiting Europe the coming summer can find the genuine Highland Tonica and Rock Waters for sale in London, at No. 73 Lombard Street, B. C., W. & Spalding Agent.

Tonica Water is a splendid appetizer. Taken before breakfast it clears the stomach, tones and strengthens the digestive organs, and puts them in capital condition to perform their proper functions.

In using the Highland Tonicas during the warm weather, put the bottles on the ice as they are needed, but never put ice into the water. These waters are at their best at about 49 degrees, this is their natural temperature. When colder than this the water should be drank very slowly.

As a general tonic at this season of the year, Tonica water replenishes the system. For that pleasant sensation we call "feeling fatigued" it is an antidote. A fifty bottle case ordered now and used regularly, according to directions, will produce very pleasing results. If money was worthless who would imitate it. It is the great value that tempers the disinclined housekeeper. So with any article of real value. True worth finds many worthless imitations. When purchasing the Highland Tonicas, Tonica or Rock, beware of imitations and see that the trademark is on every bottle. Thus you will secure the genuine.

The analysis of Tonica is to be found on every label, but the best evidence of its medicinal aid is in the effect it has within the human system to cure disease. The chemist may separate its parts and carefully weigh its infinitesimal fractions, but no chemist or physician is able to analyze its wonderful curative powers and tell why or how it acts thus and so. That is a mystery beyond the wisdom of man to solve. It is Nature's secret.

WHAT ARE YOU DRINKING?

Are you using what purports to be an imported water upon your table? If so, you would be surprised to learn that, instead of being the product of some famous spring abroad, if you were to have your own city from water that you might as well have drawn from your own faucet, doctor with salts compounded by the chemist in imitation of the published formula of the water which is in the bottle. Yet would it be more likely, and your attempt to secure a healthful beverage are frustrated by the "tricks of trade."

Why not purchase a home water, more beautiful, milder, absolute purity, for pleasant to the taste than any water imported from abroad or that purports to be so? Such is to be found in the Highland Rock Water from the Highland Springs of the Franklin County.

No mystery about it.

Nature has done all that is done to make Highland Tonica Water capable of producing the remarkable results that are achieved from the use of that remedy. It requires no secret ingredients, no covert handling, no doctoring, to make it ready to allay the sufferings of the people.

For the Highland News.
In the hour of absence and of solitude, the husband is impressed with a sense of the amiable disposition and demeanor of his wife, of her unwarried endeavors to promote and perpetrate his happiness, and of the high bounds he is thrown, and should, by the want of the society and assistance of a woman, by the most unequivocal expression of attachment and tenderness, his full appreciation of her amiability and usefulness. But too often these expressions of appreciation are not forthcoming, and, with a mistaken silence, the husband shrinks from honoring his wife, and reproaches those few words of praise which she so well deserves, and would so greatly appreciate. "My master is all very well," said the dog, "but I wish he had a tail to wag when he is pleased.

In politics, said Cavour, "nothing is so absurd as rancor. In the same way we may say that nothing is so absurd as lack of education in marriage as a sure defense. Reynolds, in his "Life and Times," tells of a free and easy person who passed three festive days at the seat of the Marquis and Marquess of - - - - with no appetite, convinced, without any irritation, of the wisdom of a subject and silence. Then silence is, indeed, golden. But the silence persisted in is an instrument of deadly torture. A wise man by his words makes himself understood."

Poisons and their Antidotes.

In case of accidental poisoning, to which any person is liable, it is well to remember a few simple rules. The first step is to evacuate the stomach; this should be accomplished by the most powerful and speedy means, as the poison should be borne in mind that alkalies neutralize acids, and, the reverse, therefore, if the poison taken be an acid such as sulphuric, nitric, or muriatic, give the sufferer large portions of soda, magnesia, chalk, or plaster; if acetic acid has been taken give some form of lime, and for carbolic acid, large draughts of oil or milk are most effective. When the poison is one of the alkalies, common vinegar being always at hand is most frequently given. The fixed oils, such as castor, flaxseed, almond, or olive, form with the alkalies soap, thus destroying their caustic effect; these oils should be given largely. Aside from the poisons above mentioned, those most liable to be used, are Paris green, arsenic, corrosive sublimate, opium, laudanum, chloral, and strychnine. The treatment for Paris green and arsenic is the same: give as much milk as possible, while of egg or flour and water, then vomit the patient, after which give tablespoonfuls of dilute sodium of hydroxide, followed by a tablespoonful of salt in a cup of water; vomit again, give a dose of castor oil, with rest and stimulants. A person poisoned by corrosive sublimate should be promptly washed, the fingers being quite burning after the toxin has been washed away. Times, times, times, times, times. If milk and raw egg, follow this with a dose of castor oil. Children are sometimes poisoned by eating the heads of matches, when this occurs the child should be vomited free of arsenic; sulphate of copper, administered in about two ounces of water, and repeated, then give a dose of magnesium, nitrate of copper, and stannous nitrate; for an overdose of opium, laudanum, or colocynth, give prompt and freely by administering gunpowder and warm water, then give strong black coffee and keep off the pepper by slapping the flesh, exciting the patient by the galloping, keeping up an artificial respiration if necessary. For poison of strychnine, vomit once or twice, give a purgative, and secure absolute rest in a dark cool room free from draught.

If these simple directions are promptly and thoroughly carried out, they will be successful in saving, perhaps, very precious lives.

Robert J. Barlett says to boys, "Don't be afraid of standing persistently at one thing. That's all there is in it." A wise advice is this advice and true advice. It is a question of the wisdom and custom of the time and age of the present age. The time was when the man of war was honored as a vessel. The boy who situated himself so that he was not a part of the ship in one's own mind and energy to one's own soul. This is an advice to one's own soul. Do this, it may be, in time, will be his own soul. This is a question of the wisdom and custom of the present age. The time was when the man of war was honored as a vessel. The boy who situated himself so that he was not a part of the ship in one's own mind and energy to one's own soul. This is an advice to one's own soul. Do this, it may be, in time, will be his own soul.
THE HIGHLAND NEWS, June 8, 1886.

CONFIDENCE.

We have no large sums of money to wager on the power of Highland Tonica Water to cure the diseases of persons of whose ailments we have no actual knowledge, whose cases we have had no chance to diagnose, and of whose complexion we know only by fragmentary newspaper reports. And if we had such sums to throw away, we should do it only bluster and bankrupt upon our part to make such offers. The magnificent reputation which Tonica enjoys was won by no such means, but by storing worth and true merit. Such a reputation does not require large talk to bolster it, but only actions to prove it deserved. In earnest of our faith in the value of the curative properties of Highland Tonica Water, we are prepared to make the following offer:

To the health of Tonic for subject to reasonable conditions of use, for the treatment of twenty patients suffering from any of the following named diseases, to wit: Diabetics, Brights Disease, Cataract of the Bladder, Dyspepsia, Heart-burn, Serofudous Affections and any forms of female weakness.

Parties wishing to take advantage of this offer can learn all particulars by addressing, stating what ailments we are willing to be subject to reasonable conditions of use, and what we will forward letters giving details of conditions and arrangements. Be it understood that this offer is made in good faith and that in every case treated the water and advice given is entirely free of charge, the only expense to be that of freight.

LETTERS FROM THE PEOPLE.

HARTFORD, Conn., May 28, 1886.

E. N. B., No. 3. Manchester, Conn.

GENTLEMEN,—You sent the Tonica as soon as convenient, we have used all but one bottle. Your water has got to be a necessity with us. We all use it now, Mrs. F., the baby, and also my boy. I am sure that it has done all good, and wish to have them all the time. As to myself, I have not been better than I am now, ever.

Very respectfully,

E. H. JONES.

OFFICE OF THE CHERRY HOLLOW WIRE WORKS, SPRINGFIELD, June 8, 1886.

GENTLEMEN,—Enclosed find check for last case of Tonica Water. Our physician says it indispensable. You may please consider our advertisement in the next issue of your paper. That in your last paper sent us many inquiries. Yours truly,

W. D. STEVENS.

RANDOM TALKS NO. 1.

With Respect to House Building.

What one about building a dwelling, as it happens that the questions of the many, and convenience of rooms, and other matters of detail we need not discuss at the moment, attention is paid to decorative purposes. The exterior and interior of the house are carefully considered, while the important questions of healthfulness, such as proper drainage, thorough ventilation, and an abundance of sunlight, in fact, sanitary details are emphasized over a scarcity of thought, except as to how to arrange with the least outlay regarding them. The penalty for this is often paid by ill health, sickness, and death. The sacrifice of the fine buildings may be worth the price paid for the self-brought plague, produced by carelessness in these things. It is difficult to lay down arbitrary rules in such matters, because of the variety of conditions that exist in these cases. But there are certain details for which a general application is desirable, that a few of these details of sanitary precautions, which will be interesting to our readers. The usual defects of such homes may be easily remedied at the outset, which, if left for subsequent treatment, would bring a burden of discomfort, to mention risks only.

The misapplications which you should ask yourselves are these: Is the situation suitable and dry? Is the soil dry? Are the walls dry? Are there sufficient ventilation possibilities? Is the water supply sufficient and good? Is there special care taken of the water supply, derived from a well, that no drain runs in proximity to it, or that there are no drains near it. If there are no drains near it, it is at least thirty feet away, so that as an air is driven from them to permit the house. That the closets themselves are flashed, and all drains, overflow pipes, and sewer connections are properly trapped. Notice that the closet doors are constructed in a manner to perform the purposes for which they were intended. For a healthy chimney is, as far as possible, is provided, and it is in some cases a necessary condition. Still these things are not little things, that every property owner in his house can do great credit to the health of all those who live in it, and to the value of the house in the market.
GOLD, GOLD, GOLD,
For the Children.

Our Scraps. We like to please the children for when the little folks are pleased the big folks are sure to be and
that makes it pleasant all around. We propose to set a whole army of boys and girls at work contesting for our prizes, and
we don't mean that any of them shall go unwarded for their labours or pastimes, as it will be to most. We want
boys and girls in every town, city, village, or hamlet, to get subscribers for "Far
Ham, and News." It only takes twenty-five cents a month to get a subscription and
$1.00 In Gold.

For the second largest prize we will give a year's subscription and a prize of a
$5.00 Gold Piece.

For the third largest we will give a year's subscription and a prize of a
$2.50 Gold Piece.

For the fourth largest we will give a year's subscription and a prize of a
$1.50 In Silver.

For the fifth largest we will give a year's subscription and a prize of a
$1.00 Silver Piece.

In addition to these prizes we will give a commission of twenty per cent on all
lists of five or more names.

Of course in every case the money must accompany the orders. Write plainly
giving address of each subscriber with post-office box or street and number as
may be best.

The full communications to Case Bros., South Manchester, Conn.

PATCHWORK.

Ladies should read the advertisement of Silks on the seventh page of this issue, it
will pay them to send for samples.

HOUSEKEEPERS

Will find as cunning time approaches, the most
little gummed labels, advertised by Flubsy Bros. of South Manchester, very useful marking their cases. See the seventh page.

A LOCK OUT.

It is a good plan to "lock out" your choice poultry from the garden when you have been using pink soap on the potatoes. A few
bags well hidden with the potatoes may cause the death of your most valuable fowls. Nothing is more effective or tasty for this
purpose than the wire netting sold by the Cheney Buggy Wire Works of Springfield, Mass., whose advertisement appears in this paper.

COMMON SENSE.

Means good sense and judgment in all things, and when used with Bacon Tweed Wash will find it a matter of good judgment to invest
in a ton of this splendid Wash at a price of $1.00 a ton. The wash can be obtained in the East by H. B. Booth & Son of
Albany, N. Y., and in the West by E. C. Meacham, South Manchester, Conn.

When answering advertisements mention this paper.

HIGHLAND TONICA WATER

ROCK WATER.

The Climax of Table Waters.

FLOWING FROM A NATURAL SPRING, HEALTHFUL, INVigorating, REFRESHING, PLEASANT TO THE TASTE, UNEQUALLED IN QUALITY, AND UNPARALLELED IN PURITY.

IT TONES THE SYSTEM AND PREVENTS DISEASE.

Read the following Analyses:

**Massachusetts Institute of Technology, Boston, August 1, 1885.**

Case Brothers, Gentlemen:—

I have examined the spring water you have, and beg to submit the results: The results are expressed in grains to the U.S. gallon.

- **Silica**: 0.405 grain
- **Chloride of Sodium**: 0.185 grain
- **Carbonate of Magnesia**: 0.189 grain
- **Carbonate of Potash**: 0.187 grain
- **Dissolved Air**: 0.051 grain
- **Total**: 0.452 grain

The water contains 0.187 grain of Carbonic Acid Gas in solution and is alkaline.

Yours very truly,

LEWIS M. NORTON.
