Drifting along.

We are drifting along on the sea of time.

"Drifting away to another clime;"

We count the waves that go and go,

Rumbling away as the rows move,

We look to the lights on the brow of bay.

When we cross our anchor at break of day;

But the dim, moon town seemed dipped to sleep.

At the feet of the lady that childhood knew.

We shoot to the isles along the shore,

But our old ones, they seem like the stars in the clear.

And the dreamy heart of the moon in the sky.

Is looking away to the other side.

With ever a dream, or ever a smile.

As we drift along from mile to mile.

Drifting along, and the moon goes by.

Drifting along with the shining light.

Drifting along, and the shadows lie.

Lengthening away in the eastern sky.

Drifting by, and the sea wears over.

Over the dim, hazy of a sombre deep.

A nameless lullaby appears in sight.

A silver sea, as dark as night.

A nameless rest, we now call sleep.

And our head has settled on a shining deep.

A client harum, and ever the head.

Silence supremo on every hand;

No wake is seen at that windshield;

No somnolent one has been before;

No light of life in the deserted land.

To tell the maritime where to land;

But only the distant shadow of a scene still.

Shall the dark ones, shall the last Great Will be open and read, and there and then.

Shall the story, another, on every voyage begin.

Her voice was gentle, soft, and low,

continued he in his estimate. Aloud he slammed:

"I -- so that is -- beg pardon -- I sent for Dr. Martin."

"And I am Dr. Martin."

He came up from the lounge in amazement.

Had a thunder bolt fallen at his feet he would not have been more surprised.

Of course he had been of these affairs, but he had imagined them all of opaque matters, loud voices, and with short hair.

A woman doctor who appeared so entirely the lady was completely out of my thoughts.

For the moment, pains and ouches were forgotten.

For ouches, by himself, I should have said.

The lady did not for one moment forget that he was the patient; she the physician. She asked no questions. Was he temperate at the table? did he take vigorous exercise in the open air? Was his bed-room well aired and ventilated? Was the house free from colds again - and so on.

Then she looked at his tongue, and taking out her watch, examined his pulse in a business-like manner, while he, poor fellow, felt the strongest chills and thrills running down his spine.

The touch of that firm white hand went through him like an electric shock.

"Perhaps a little brassy or a dose of morphia would make me all right," he ventured.

"I never prescribe alcohol in any form, very rarely opin," she answered severely.

"If you had sent for me two days ago, I should have preached you a sermon from this text: 'Physician heal thyself,' and directed a five-mile walk every morning before breakfast, and a mattress to take the place of your feather bed; but I see you are now in need of different treatment. Eat nothing today: Sleep all you can; take a wine-glass of this once an hour." Dr. Martin produced from her snatched a dark-colored bottle.

"And may I inquire if this -- this -- really is well known to the materia medica?" humbly asked the sick man.

The lady laughed a low musical laugh.

"Oh, don't be frightened. It is nothing poisonous I assure you. It is called Tonic Water, and is put up at South Manchester. Y. Dr. Gartry started it up some five or six years ago."

"Well then," he said, "I shall call again to-morrow. Meanwhile, give up all care, and take absolute rest," and she bowed herself out.

He had already sent to have Dr. Holmes attend the poor patient, so there was no reason why the last command should be obeyed, but instead of going to sleep the doctor lay declared that he had wide-open eyes thinking of his physician.

"My joy how did she order me, though. Imagine Miss Deborah talking in that style. And the medicine; wonder if it's good for anything.

"Don't you tell me the new doctor was a woman?" The question was addressed to Miss Deborah, who now came to see if anything was wanted by the patient.

"Why didn't Napoleon beat the English?" sarcastically asked she, "I'll tell you why, 'cause they wouldn't let him. I think he's all foolishness for women to try to take men's places, any way. If you'd listened to me you wouldn't have sent for her, and I hope---"

"Miss Lincoln, please bring a cup of tea," sternly interrupted the doctor. And so Miss Deborah for the second time was prevented from saying what she wished concerning Dr. Martin.

I will not tell you how many times the sick man looked at his watch before his physician declared him soon to be well. The Tonic Water had acted like a charm. His head was clear, back free from pain, and stomach in a condition to digest, as it seemed, an unlimited quantity of food. The grub of the day before went down with a relish which made Miss Deborah envy it.

Dr. Martin came at last, and his impression of the day before grew deeper. She was the most charming woman he had met for years. If he only might be sick for weeks, months, a year. And yet, he did not really wish to be sick. For he wanted no other reason by which he could enjoy her society. He was well-to-do, pretty good looking, barely middle aged, and many a woman had wished to share his heart.

But he was talking and he had not heard a word.

"Chicken-broth and oatmeal, or something really simple;"

Cranberry juice, with the addition of tea.

For pure drinking water, I recommend Rock Water. It is bottled by the same firm that makes a different spring, not being medicinal in character. Many of the bottled waters for sale are manufactured from some filthy pool, and are really deleterious in effects. These I know to be all they claim and perfectly genuine. She spoke with so much enthusiasm that Dr. Gay caught the inspiration. If she had prescribed arsenic or halmium he would have taken either without a word. How much more readily would he use the remedies common sense approved. The neighboring apothecary soon replaced in a large order for both Tonic and Rock Water.

The third day should have witnessed a return of the malarial attack. Save a slight headache and feeling of languor, he experienced no trouble. The fourth day he was better, but insisted that he still needed Dr. Martin's visits.

And so day after day passed. There were many calls for Dr. Gay, but he would answer none of them. He grumbled that "folks wouldn't let him enjoy a week's sickness with- out tormenting him to death." Miss Deborah, however, declared that he was never before known to him to have such an appetite or to be so fussy about his clothes. Dr. Martin came occasionally. He tried to discontinue her visits altogether, but the patient told such a pitiful story of his own condition and the pain in the
CASTOR OIL—HOW TO TAKE IT.

Caster oil, which is the oily substance expressed from the seeds of the castor plant, is one of the best, and most frequently used of digestive remedies, and was not for its nauseous flavor would be yet more popular. It is the same time one of the most efficacious and purgatives, and is suitable to persons of all ages. You may give it to the infant as well as to the most infirm and delicate. It is usually given in doses of one tablespoonful, but its action commences in the upper part, and it is efficient in driving down imperfectly digested and other matter that may be irritating in the stomach, and causing pain. The dose varies from a few drops to half an ounce, or more, but most persons take more castor oil than is really necessary to produce the required effect. One teaspoonful is often sufficient for an adult, and sometimes sets as well as a larger dose. There are many preparations for taking castor oil as to avoid its irritating effect. I think you will find the following one of the most efficient plans:—Pour into a wine-glass full of cold water, split the egg shell over the whole of the interior of the glass and the lips with the coffee. A teaspoonful or more of the mixture is taken three times a day, and when it will form a large globe, lying perfectly free, and not in actual contact with any part of the body, the operation has been well conducted, he will not have tasted the oil in the slightest degree.

—From Towns, Rural and Suburban. In "Galton's Magazine."

RANDOM TALKS, No. II.

PUBLIC SANITATION.

The question of the relation that the drinks of public water bears to public health, is one that is receiving constant and careful investigation. Too much attention cannot be given to the arrangements that make up the sanitary conditions of communities, for upon these the public health, in a large measure, depends. Inquiry proves beyond doubt, that the risk and spread of many diseases is in many cases impure water, improper sewerage, and the existence of cess pool pits and filth in the vicinity where the waters are carried. It is the opinion of those who have most carefully studied the subject, that from these sources more than from any other diseases, such as fever, scarlet fever, diaphtheria, and kindred complaints, while contaminated drinking water is the whole of the ailing and causing pain. These contaminations are often caused by the set back from clogged sewers and drains, leaking cess pool and privy vaults, which are too often located in close proximity to the wells from which is drawn the daily supply of water. It is not, perhaps, generally known to what extent these harmful agents find their way under ground, but it is remembered that the earth is full of porosity and fissures, and water from 100 feet to 1000 feet deep from the surface. It is easy to understand how these poisonous liquids get into the water, and are drawn direct from these wells to public fountains. This is the case with many of the water supplies furnished by the public company.

Considering the readiness with which water can take an impregnation of any kind, the occurrence of such diseases, must be no longer deemed a matter of small consequence, for upon the sanitary condition of the communities, the health and welfare of the people is predicated. In many of the cities and towns where water is supplied in this manner, the water is often supplied from wells which are neither properly protected from the surface, nor properly filtered. The result is, that the water furnished to the public is not always pure and wholesome, and the consequence is that many cases of disease are contracted from the use of such water. It is, therefore, necessary that every effort should be made to ensure the purity and quality of the water supplied to the public, and to prevent the introduction of any impurities into it. This can be accomplished by proper filtration, and by the removal of impurities which may have already found their way into the water. It is also important to ensure the proper protection of the wells from contamination, and to prevent the introduction of any impurities into them. In this way, the public health can be safeguarded, and the welfare of the people ensured. It is, therefore, necessary that every effort should be made to ensure the purity and quality of the water supplied to the public, and to prevent the introduction of any impurities into it. This can be accomplished by proper filtration, and by the removal of impurities which may have already found their way into the water. It is also important to ensure the proper protection of the wells from contamination, and to prevent the introduction of any impurities into them. In this way, the public health can be safeguarded, and the welfare of the people ensured.
DIRECTIONS FOR USE

The general directions for using Tonics are almost stated thus: First boil one gallon of water and use towards the quantity of Tonics Water, add to which you will have the effect of the two together. If you please, you may use one quart of Tonics Water and one quart of hot water. Add to this a teaspoon of baking soda each time. The effects of the water with the mixed Tonics Water, and the mixture of the water, is a very effective remedy for insomnia. It is also effective in the treatment of neuralgia, gout, and rheumatism. The effects of the water, added to the water, is a very effective remedy for insomnia. It is also effective in the treatment of neuralgia, gout, and rheumatism.

For WHEATEN

Wheatmen will find it for their interest to enrich their wheat with Highland Tonics Water. The Tonics Water is very economical to use, and in the treatment of certain conditions, it is a very effective remedy for insomnia. It is also effective in the treatment of neuralgia, gout, and rheumatism.

MANN'S CHEMISTRY VERSUS NATURES.

MANN'S CHEMISTRY VERSUS NATURES.

Every client of the chemistry, who has been under conditions under which a chemical experiment is tried, may very materially affect the results reached, and in this fact lies the wide difference between the works of man and those of nature. The conditions between the labora-

KIND WORDS

From The Bost. Commer.

The Highland Tonics Water is a new and excellent beverage for the benefit of the human body. It comes from the wonderful country of Scotland, where it is made in the purest manner. The water is of the highest quality, and is not contaminated with any other substances. It is praised by doctors and nurses alike, and is said to be a cure for many diseases. It is a remarkable discovery, and is sure to become popular.

A STERLING COMPANY.

The Stickle Machine Company of Norwich, this State, are large manufacturers of machinery for the making of fine Tonics Water. They have been in business for many years, and have a reputation for excellence in their work. They are well known throughout the country, and are highly esteemed by all who use their products.

OTHER EXPERIENCES

I had been suffering for many weeks with insomnia, long, weary nights I lay and tossed about, unable to sleep, and seemed to be awake at an early hour, unrefreshed. With the first bottle of Tonics Water I experienced a radical change. Within a short time after taking my last (profuse) amount, I fell asleep, and from which I awoke the next morning feeling like a new creature.—City Man-

V. Y. C. CHURCH.

If no great thing is a thing of great value, the same is the case with the treatment of insomnia. It seems just as apparent to me as it is no great thing that tonic is a good thing. It is so easy to fall asleep, and from which I awoke the next morning feeling like a new creature.—City Man-

Home-rule for Ireland means much,—so person living within the confines of the island will go uninfluenced by such a measure, and an inestimable weight of responsibility is placed upon untried means. It means grappling with new questions and new phases of old questions. We must bring to the fore unknown men and relegate to oblivion many who are now prominent amongst the agitation and reorganisation, pulling down and rebuilding until the whole fabric is altered and changed to meet the changing things, and the question is, is Ireland ready for this change? When she is, home rule will come in spite of Tory or Liberal in the economy of that “Destiny that shapes our portion,” that is the inevitable law. The grand old Premier’s dissolution of Parliament is an appeal to the country is in the nature of the old cry, “Vox populi, vox Dei.” (The voice of the people is voice of God); the decision may be delayed, apparently defeated, for a time, but in the final triumph of Mr. Gladstone’s principle of right and justice, the world has no doubt.

Nature’s wonderful healing agent in disease of the urinary system is Highland Tonica Water.

Nature’s pure drink for man is Highland Rock Water.

LETTERS FROM THE PEOPLE.

Great wonder is often expressed among our friends that in the introduction of the Highland Tonicas, Tonica and Rock, we adopted methods so widely different from what others in similar enterprises, in fact, that so little newspaper and sign board advertising has been done. We pursued our method of naturally giving the product due credit, because we knew that the public were not likely to recognize true value, we could therefore trust to the inherent goodness of the product and Rock to sufficiently advertise themselves. The sequel proves that our confidence was well placed and that some of the tendencies of these facts, the like of which we are constantly receiving.

WORTH A GOLD DOLLAR FOR EVERY DROP.

29 EAST 4TH ST., NEW YORK.
June 22, 1886.
Moore, Clan Brothers,

GENTS,—I desire to add my testimony in favor of your “Tonica Water” as an invaluable tonic, specific remedy, and speedy relief for kidney troubles.

For several years I have been under treatment for kidney trouble from various physicians without results, and without any decided conclusion as to the true nature of my disease until about six months since on being attacked with vomiting, vertigo, and extreme prostration, a test made by Dr. H. Hollander Carbon, showed my aliment to be mucus diathesis, 33 grm. sugar to the oz., specific gravity 1029, and quantity of urine about four quarts daily. I immediately adopted diuretic diet and the tonica water with beneficial results. I experienced no improvement and after spending much of my time on my back with extreme weakness for five months, my attention was called by a friend to the cure of a similar case, by the use of Tonica Water, who, among other things, gave it to me as a cure for a gold daily for every drop, to the diathetic.

As an experiment I immediately ordered a dozen quarts of Tonica and commenced its use by half glass dose before each meal and at bedtime, the benefit from its use was immediate in increased strength and appetite, and by the time I had used the dozen bottles, I resumed ordinary exercise without fatigue, and now, after six weeks, and on further tests, and a reduction in weight of twenty per cent, and of urine reduced to about one half, with strength restored, bowed to the public opinion, and it gives me great pleasure in recommending the use of a simple remedy from which I have experienced so much good in such brief a period of time, and the use of which I propose to continue, if found necessary.

Annie Brown, Rockford, Ill.

Respectfully yours,

W. L. McAfee.

The following note was received from our New York agent, Messrs. C. W. Harrer & Co.: Gentlemen,—I have used and prescribed the Tonica Water, and find it all you promised it to be. People of sedentary habits, troubled with constipation, flatulence, and considerable indigestion should have the Tonica to be cured. Yours respectfully,

Dr. Mount.

NEWPORT, R.I., June 18, 1886.

Moore, Clan Brothers,

Gentlemen,—Having been greatly benefited myself, and each member of my family also in the use of your “Tonica Water,” I want to help along your work in “leading the sick, etc.,” so I must urge you a little experience of mine in senescence, where your “Tonica” played a very prominent part.

I am in, coming here on the boat from Providence, there was quite a swell on the day, occasioning of course quite a motion to the boat, which brought on senescence to a little girl, some ten or twelve years old. The mother of the girl was very anxious to find relief for her little one, and inquired of my wife if she thought anything that could be done. My wife got on board. I told my wife to tell her I did not know, but I had some mineral water which I thought would help her. She said she would like to try anything, and would try that.

I opened a bottle of “Tonica” and gave her some in a glass, and she gave her little girl some, who all the time had been either lying down or being held by her mother. The little one seemed only to touch her lips to the water, but drank enough to produce a marked change in her face.

While comparatively helpless before, she then walked about the cab, for “Tonica” had done the work, giving immediate relief to the little sufferer. And during the rest of the journey, and in the roughest part of the water, she drank, and done herself again.

My experience has been that “Tonica” never fails in its mission.

The mother of the little girl came to me twice during the rest of the journey, and was very profuse in her thanks for the good the water had done, and, to use her own words, “wanted to pay me, for that was a great thing.”

The paying was of course refused, as I was only too glad to help the little sufferer, and to find out that “Tonica” would cure senescence.

We reached Newport, and parted company.

with the lady and her family, she giving us a final benediction, wishing us great success in the reaching of our little ones.

Wishing you great success in your undertakings, and taking in the morning your “Tonics and Rock Waters” into the families of that gentleman and the well, for all who use either be benefited, I remain a lender (because having been greatly helped of) of “Tonica.”

Yours truly,

E. C. STANLEY.

SPRINGFIELD, July 12, 1886.

Clan Brothers,

Gentlemen, Sirs,—I feel that I should be ungrateful toward suffering humanity, if I should not take this opportunity to say that Highland Tonica Water has done me good. I have been suffering with inflammation of the bladder for two years, have been to a number of doctors and tried everything I could bear of without benefit. About three months ago my little paper “THE HIGHLAND NEWS” found its way to me. Being a timid soul, I thought there must be some virtue in the water, as most all seemed to have a kidney difficulty. I was so light I think my trouble might be further back than the bladder. I was feeling quite badly at the time, and so thought I would send for some of the Tonica, thinking it would at least do me no harm, if it did no good; but to my surprise, by the time I had taken the third bottle the inflammation began to cease in some measure, and has continued to do so to the present time. Of course I am not well, but the Tonica has done for me what nothing else has, doctors included, and I must say that the Mineral Water has taken a great rise in my estimation, as I think it has an effect on the kidneys, and as far as I am aware, no other remedy has. Respectfully yours,

98 Water St. Miss Sarah Gaylord.

MAKE APPLICATION.

We would advise our friends who desire to handle the Highland Waters, Tonica and Rock, to send in their applications for the agency of the same at an early day. These waters are firmly established before the public, and the amount of sales are constantly increasing; they are winning for themselves golden opinions and deserve their place in mind that we appoint but one agent in a place, to whom we sell exclusively.

GIVE IT A CHANCE.

Below are cases in which Tonica water will fall to effect a cure.

First.—When the patient is so prejudiced that he will not try2 it, preferring to remain sick rather than to be cured by so simple a remedy.

Second.—When the patient has placed his faith to drugs, powerful drugs at that, that belief is possible it is a remedy for to be of use unless he can feel every dose, acting all through the system, has some action, and with the slow processes of nature, no water can do it.

Third.—In those cases where the patient runs to one doctor after another, getting advice he never means to follow, taking a few doses of one remedy, and a few doses of another, complaining to everybody of his ailments, and expecting to live as long as his doctors kill him, he has been in a day and a case, and that “as man soweth, so shall he reap.”

These cases are in which Tonica Water will fall, because it hasn’t a chance.

Tonica does not transcend nature’s laws, but there is no one but must have an opportunity, and when it will reach the subject, “old alike every time.” Give it a chance.

“A man who lives in the swamp daily prays for health. Pay from the hill top, and your prayers will

THE HIGHLAND NEWS, JULY, 1886.
BE PATIENT WITH THE LIVING.

Sweet friend, when thou and I are gone Beyond earth's weary labor, When the seasons of life's need of grace From earthmen's cheery shoulder Past all the earth's sad story, till the last, the care, And down the steel-cold path, What tender thought shall we have gained Above the broad world's earth, And then lipe too many of their praise Will tell our merits over, And faith in the hour to see, Shall no defect discover; Then the grass on shaded flowery Where stones were stuck to cement Our steep hill path, will scatter flowers Above our pillow-grown.

Sweet bread, please entertain both side. All love is past forgiving, Such love as never deigns to make - Be patient with the living.

Today's expression salvages every care. Our blinding tear is no more. Then patience, o' er what human edge May what a nonsense snore.

In is easy to be good, When doth the loving show their kindness And easy to discern the From memory's apter pleasant; But yet we are not to be found, Love is past forgiving, To make and mend the fate. Be patient with the living - David Clow.

NOSE BLEEDING.

So many people are sufferers from nasal catarrh in this country, that hemorrhage from the mucous membrane of the nose is a common sight. There is not at all an unusual, yet at times it assumes a very serious character, and it becomes an important question how to approach it. Perfect rest in a half reclining position, under such circumstances is desirable. When it becomes necessary to plug the nostrils, do not put in a large cotton plug, but a few leaves of "wild yarrow," which grows abundantly in every country village, furnish them, and place something upon the nose to stop the bleeding, but the after effect will be found much plusher than when any other substance is used.

JOTTINGS.

A class proves its right to certain privileges on account of their exercise of duties in an orderly manner, and right that in a proper and wholesome manner.

Are you going abroad? Take a case of Tonic Water, and avoid the evil effects of a change of water and the dangers of seasickness.

"The cardinal formula of health is pure water, pure air and pure soil. Whatever poisons or contaminate either of these jeopardizes health, and should receive prompt investigation and removal."

Eating going to the mountains or shore, if they do not find the Highland Waters, Toned and Beade, can have them forwarded by express or freight by sending their orders direct to the springs, or to the nearest general agency, for the last page of this paper.

In the treatment of disease we are recognizing more and more the value of simple, natural remedies, and the buttressing of powerful drugs. We are learning, at least, the lesson that Nature had got something to teach us always, that she has provided an antidote for every ill, if we would but find it. Among the remedies Tonic Water stands prominent.

As we become more conversant with the laws of physiology and anthrozoology, and realize the important part that water has in the economy of nutrition and the composition of the blood, we may recognize how necessary to our good health it is, and when Nature has compounded with that water, mineral ingredients which supply the deficiencies of the system must do so, as in the case with Highland Tonics Water - that necessity becomes still more apparent.

An eminent physician has written this advice to travelers: "When people drink the same safe water to drink in a mineral or pure fresh water, because there can be little doubt that the attacks of fever from which we are so frequently ashamed are liable to suffer are frequently embittered but water by other causes."

This advice is specially applicable at the season when so many are on the move. If the days are sultry and the nights cool, no water is cooler or better than the Highland Tonics and Fresh Water, which are natural remedies and have a very salutary effect on the system.

Nature's climate of table levengers is Highland Rock Water. Nature's most potent curative for scrofulous affections is Highland Tonic Water.

QUESTIONS ANSWERED.

Under no hand we will endeavor to answer all questions from subscribers relating to the subjects of health, rules of hygiene, and sanitary laws. Questions concerning the use of Tonic Water and Tonic Water will receive special attention.

W. R. N. Y. C. We cannot do better than to call your attention to the very interesting letter upon the subject of this page under the title of "Letters from the people." It will give you more light than a column of editorial remarks, and it can easily be copied for your own use.

J. S. M., Brooklyn, N. Y. We cannot give the questions in this column in too much space, some of them being very voluminous and would require half a page additional to do them justice. We shall, however, try to answer some of the more important letters in our next.

E. M. W., Woonsocket, R. I. The trouble is on the worst forms of sanitation, because most dreadful. Hydrophobia is a great many, and it is not unusual for the "hounds" to move every day, but they are irregular and frequent, and cause the most consternations. What you need is a man in or near the town of a disease of the flesh, and the time is required allow of it. The disease is contagious, and can easily be followed by two-thirds of a glass of Tonic Water, and not by three or four glasses.

C. X., St. Louis, Mo. You will find the same thing in a small group of people, of different ages, and different religious and political opinions. We have no agency so far west as your city. We can direct you from the springs.

W. P. O. New York. We cannot answer your question without more definite information. Dyspepsia is used to cover so many ailments, from the slightest forms of indigestion to the most serious conditions, to which is added to the stomach, liver, kidneys, and bowels. If you will send us a full description of the case we will endeavor to give the best advice possible. In the case of "Dyspepsia" we will digest digestion and secret society.

T. C., Boston. You call "colds," property, "rational remedies," the formation of stones in the kidneys, and that is not only the London's way of treating the kidneys, but the latest news of solution at 7 am, and the other stone in the kidneys, and the stone in the kidneys.

C. T. B., Boston. What you call "cold" is property, "rational remedies," the formation of stones in the kidneys, and that is not only the London's way of treating the kidneys, but the latest news of solution at 7 am, and the other stone in the kidneys, and the stone in the kidneys.

WHAT HAS BEEN DONE WITH TONICS IN THE LITTLE CITY OF NEW BRITAIN, CONN.

Over twelve hundred bottles of Highland Tonic Water and Fresh Water have been sold by the people of the little city of New Britain, Conn. This year the latter casts. It has been [next month] and we will soon be in the water. Our customers are buying this little product, and it has been the favorite among all of them. Be sure to secure your supply of Highland Tonic Water and Fresh Water now, and keep plenty in hand. It has been the favorite among all of them. Be sure to secure your supply of Highland Tonic Water and Fresh Water now, and keep plenty in hand. It has been the favorite among all of them. Be sure to secure your supply of Highland Tonic Water and Fresh Water now, and keep plenty in hand.

Yours very truly,

LEWIS M. NORTON.

IT TONES THE SYSTEM AND PREVENTS DISEASE.

FLOWING FROM A NATURAL SPRING,
HEALTHFUL, INVIGORATING,
REFRESHING, PLEASANT TO THE TASTE,
UNEQUALED IN QUALITY,
AND UNPARALLELED IN PURITY.

IT TONES THE SYSTEM AND PREVENTS DISEASE.

Read the following Analysis:

MASSACHUSETTS INSTITUTE OF TECHNOLOGY,
BOSTON, SEPTEMBER 1, 1886.

U. S. Gallon:

Chloride of Sodium ............ 0.045 grains
Silica ......... 0.050 grains
Silica ......... 0.043 grains
Aluminia ........... 0.065 grains
Carbonate of Lime ............. 0.520 grains
Sulphate of Potash ............ 0.070 grains
Carbonate of Potash ............ 0.075 grains

The water is pure and admirably adapted to drinking purposes. It is unusually free from Ammonia and nitrogenous substances, furnishing upon analysis:

Free Ammonia 0.00009 gr. per gallon.
Ammonium Ammonia 0.00009 gr. per gallon.

Yours very truly,

LEWIS M. NORTON.
